

1.11.19

Let's talk about another thing
That makes us kitties sick
It's urinary tract disease -
More serious than you'd think!

Sometimes it's caused by food we eat
Sometimes it's caused by stress
And sometimes an infection
Is the cause of our distress

The signs can be quite subtle
So make sure to check and see
If your cat meows while peeing
Or he goes too frequently

If he tries hard to use his box
But urine won't come out
Or if there's blood in his urine
He needs help now, no doubt!

It's more severe in male cats
And it's very painful too
If untreated it can cause death
It's scary but it's true

So don't wait if you see the signs
Come right on in to Doc
He'll diagnose and treat ASAP
So you can beat the clock

The sooner cats get treatment
Then the better off they'll be
Doc and his staff can make them well
And stop this harsh disease

Howdy folks! This is Raptor reporting live from 1809 Magazine to discuss an urgent medical issue: Lower Urinary Tract Disease. While more severe in male kitties, this disease is extremely painful for all cats and can be deadly if left untreated for too long! If your cat shows any of these symptoms, call us up and come on in so we can treat and get him or her back to living a healthy pain-free life!

Over and out,
Raptor 🐾
